CONTENTS OF VOLUME 2

NUMBER 1

David Hui	1	Editorial
C. A. Meyers and **M. W. Hyer**	3	Thermally-induced, geometrically nonlinear response of symmetrically laminated composite plates
Mohammad Usman, **Mukesh V. Gandhi** and **S. R. Kasiviswanathan**	21	A mixture theory approach for the constitutive modeling of coupled hygro-thermo-elastic phenomena in fiber-reinforced polymeric composite materials
Pedro J. Herrera-Franco, **Venkatesh Rao**, **Lawrence T. Drzal** and **Martin Y. M. Chiang**	31	Bond strength measurement in composites—analysis of experimental techniques
Curtis M. Chapin and **Shiv P. Joshi**	47	Variation of residual thermal stresses in graphite/epoxy laminates
T. H. Ju and **S. K. Datta**	55	Pulse propagation in a laminated composite plate and nondestructive evaluation
Y. L. Xu, **F. Delale** and **B. M. Liaw**	67	Effect of temperature and fiber distribution on matrix cracking in ceramic matrix composites

NUMBER 2

David Hui	81	Editorial
Gerald Kress	83	Width influence on stiffness measurements of multi-directional CFRP laminates under uniaxial load
J. T. Mottram	91	Lateral-torsional buckling of thin-walled composite I-beams by the finite difference method
Tony E. Saliba, **Suzanne R. Quinter** and **Frances L. Abrams**	105	Expert model for intelligent control of composite materials processing in a press
Yi-Yuan Yu	117	Equations for large deflections of homogeneous and layered beams with application to chaos and acoustic radiation
A. Carpenter	137	New aspects relating to the behaviour of composites in space

NUMBER 3

Kelvin J. Callahan and **George E. Weeks**	149	Optimum design of composite laminates using genetic algorithms
Sören Östlund and **Peter Gudmundson**	161	Numerical analysis of matrix-crack-induced delaminations in $[\pm 55^\circ]$ GFRP laminates

M. O'Neill and **L. Hollaway** 177 Vibrational characteristics of composite structures for space

Rakesh K. Kapania and **Sarvesh Singhvi** 197 Free vibration analyses of generally laminated tapered skew plates

L. C. Bank and **A. S. Mosallam** 213 Creep and failure of a full-size fiber-reinforced plastic pultruded frame

NUMBER 4

D. N. Robinson and **M. S. Pastor** 229 Limit pressure of a circumferentially reinforced SiC/Ti ring

Sirajus Salekin, Anwarul Haque, Nurul Huq, J. S. Copes, Hassan Mahfuz and **Shaik Jeelani** 239 Effect of reinforcement geometry on the mechanical properties of SiC_w/Al_2O_3 composites

Anders Holmbom, Lars Erik Persson and **Nils Svanstedt** 249 A homogenization procedure for computing effective moduli and microstresses in elastic composite materials

Stephen R. Swanson 261 Limits of quasi-static solutions in impact of composite structures

A. Ertas, J. T. Krafcik and **S. Ekwaro-Osire** 269 Performance of an anisotropic Allman/DKT 3-node thin triangular flat shell element

Jerzy T. Pindera and **Xianlong Liu** 281 On the actual three-dimensional stresses in notches and cracks

NUMBER 5–7

USE OF COMPOSITES IN ROTORCRAFT AND SMART STRUCTURES

Gary Anderson and **David Hui** VII Foreword

John C. Fish and **Anthony J. Vizzini** 303 Tailoring concepts for improved structural performance of rotorcraft flexbeams

A. M. Rubin 313 Common failure modes for composite aircraft structures due to secondary loads

W. S. Chan 321 Composite issues in rotor hub structure design

F. Gandhi and **S. W. Lee** 329 A composite beam finite element model with p-version assumed warping displacement

Ramesh Chandra and **Inderjit Chopra** 347 Structural response of composite beams and blades with elastic couplings

Andreas W. Obst and **Rakesh K. Kapania** 375 Nonlinear static and transient finite element analysis of laminated beams

Chansup Byun and **Rakesh K. Kapania** 391 Nonlinear impact response of thin imperfect laminated plates using a reduction method

Victor Berdichevsky, Erian Armanios and **Ashraf Badir** 411 Theory of anisotropic thin-walled closed-cross-section beams

Marco Borri, Gian Luca Ghiringhelli and **Teodoro Merlini** 433 Linear analysis of naturally curved and twisted anisotropic beams

Terrence A. Weisshaar and **Steven M. Ehlers** 457 Adaptive aeroelastic composite wings—control and optimization issues

Paul S. Espinosa and **David R. Groepler** 477 Tiltrotor research aircraft composite blade repairs—lessons learned

Liviu Librescu and **Ohseop Song** 497 On the static aeroelastic tailoring of composite aircraft swept wings modelled as thin-walled beam structures

Dewey H. Hodges, Ali R. Atilgan, Carlos E. S. Cesnik and **Mark V. Fulton** 513 On a simplified strain energy function for geometrically nonlinear behaviour of anisotropic beams

A. Baz and **J. Ro** 527 Thermo-dynamic characteristics of NITINOL-reinforced composite beams

S. B. Choi, B. S. Thompson and **M. V. Gandhi** 543 An experimental investigation on smart laminated composite structures featuring embedded electro-rheological fluid domains for vibration-control applications

M. V. Gandhi, B. S. Thompson, S. R. Kasiviswanathan and **S. B. Choi** 561 A collage of experimental investigations on smart fibrous composite structures and mechanical systems featuring electro-rheological fluids, piezoelectric materials and fiber-optic sensors

Michel LeBlanc and **Raymond M. Measures** 573 Impact damage assessment in composite materials with embedded fibre-optic sensors

Raymond M. Measures 597 Smart composite structures with embedded sensors

NUMBER 8

Ryszard Pyrz 619 A micromechanically-based model for composite materials with matrix cracks

L. S. Chien and **A. N. Palazotto** 631 Nonlinear snapping considerations for laminated cylindrical panels

Robert J. Scheer and **John A. Nairn** 641 Variational mechanics analysis of stresses and failure in microdrop debond specimens

Chun-Hway Hsueh 655 Requirements of frictional debonding at fiber/matrix interfaces for tough ceramic composites

Chun-Hway Hsueh 665 Strength versus energy debonding criteria at fiber/matrix interfaces

Sokichi Umekawa and **Suketada Momoshima** 677 Composites in Japan

i Index for Volume 2, 1992
